

The Standard of Excellence  
in Teacher Preparation

The National Council for Accreditation of Teacher Education salutes the efforts of the aerospace industry to increase the number of students studying math and science through professional development opportunities for educators such as the National Conference on Aviation and Space Education and other avenues.

NCATE's professional standards for math and science educators are developed by experts in the subject areas. NCATE expects all professionally accredited institutions to use these standards in the design and delivery of their educator preparation programs in order to ensure that math and science teachers are adequately prepared.

NCATE encourages industry efforts to interest more students in the areas of mathematics and science.
